2. Generating QRs
3. Structuring an API with websockets and REST

JWT Authentication with DRF

Although JWT can be used with py-jwt but the implementation of the functionalities is redundant and requires significant security considerations.

So we can use an existing django app ie for this task which is also compatible with DRF.

```
pip3 install djangorestframework-jwt
```

```
See Examples/drf_jwt_ex
```

Generating QRs

QR codes are a visual medium of transmitting data to a computer.

```
pip3 install qrcode
```

```
See Examples/qrcode_ex
```

Structuring an API with Websockets and REST
